

LinkTag Programmer for Phoenix Card Systems

- The ICS LinkTag Programmer for Phoenix systems is a USB device and Windows™ software package that allows the user to read and program an unlimited number of LinkTags for use with the Phoenix 8000, or Phoenix AFC card systems.

- **SIMPLE TO INSTALL** - The LinkTag programmer is simple to install. Simply install the software onto a Windows XP™ or Windows Vista™ computer and plug the LinkTag programmer into a USB port. Detection and configuration are automatic.
- **SIMPLE TO OPERATE** - The LinkTag programming software allows the user to read or write a single LinkTag, a range of sequential LinkTag numbers, or a list of non-sequential LinkTag numbers. Reading or programming of each LinkTag takes less than 1 second. Hundreds of LinkTags can be programmed in minutes.
- **SECURE** – Before programming any LinkTags, the software will prompt the operator for a system tag which is included pre-programmed for your system only. This insures that only you can program LinkTags for use with your system.
- **RELIABLE** – Since the LinkTag programmer has no physical connection with the LinkTags, there are no connectors to wear out or replace.
